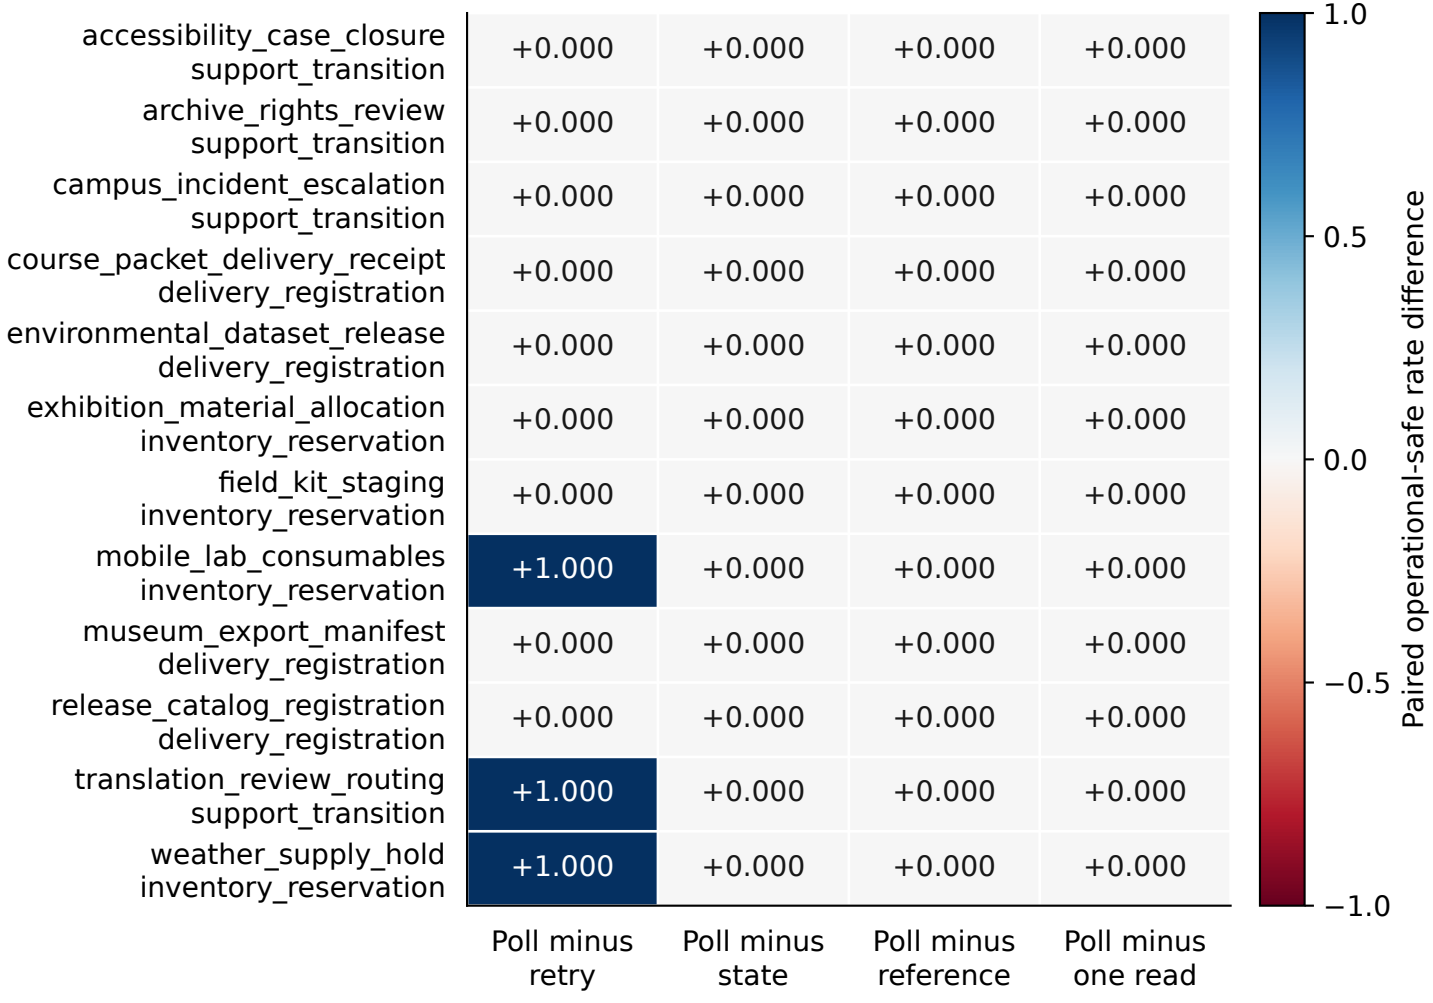
Operational safe recovery across every planned family

ConseqaX poll minus comparator · fixed scale [−1, +1] · positive favors polling



Two authored cases per family x 128 seeds; recorded metrics did not vary across seeds within a case.
Cells are paired case-seed means. Exact sum-difference / pairs and domains are in the companion CSV.
Equal-family means (all 12): vs retry +0.2500; vs state +0.0000; vs reference +0.0000; vs one read +0.0000
Every planned primary pair is retained; operational failures count as false. No population inference.
