One committed effect can coexist with a timeout response

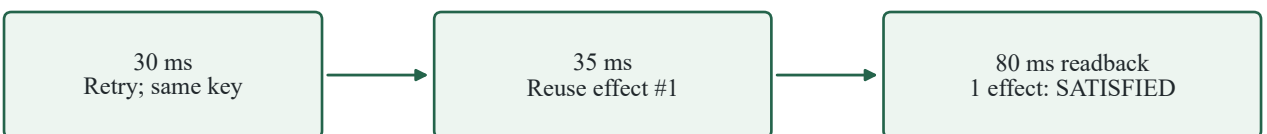

Contract: exactly one matching effect by 50 ms, persisting through 70 ms.

Both final readbacks: observed at 80 ms; complete scope; watermark = 70 ms.

(a) Retry without idempotency

(b) Retry with the same operation key and payload

Illustrative event order, not to scale. Assume matching payloads and persistence.
Idempotency is a declared provider property; source metadata must support origin.
